Introduction to T-SQL Queries – Module 6

Kathi Kellenberger

Redgate Software

Module 6: Grouping

Grouping

- Summarize the data
- Special functions called aggregate
 - COUNT
 - SUM
 - AVG
 - MIN
 - MAX
- Return one row per group

Summary (aggregate) query

CustID	OrderID	Amt
1	101	5
2	102	10
3	103	7

SELECT
COUNT(CustID) AS OrderCount,
MIN(OrderID) AS FirstOrderID,
SUM(Amt) SumOfOrders,
AVG(Amt) AvgAmt
FROM Orders;

OrderCount	FirstOrderID	SumOfOrders	AvgAmt
3	101	22	7.33

GROUP BY clause

- Columns in the SELECT list or ORDER BY must be in an aggregate function or in the GROUP BY
- Syntax

```
SELECT <col1>, <ag function>(<col2>)
FROM <table1>
GROUP BY <col1>
```

Aggregate Queries

CustID	OrderID	TotalDue
1	1	50
2	2	76
1	3	150
1	4	25
3	5	100
3	6	30
2	7	60
1	8	90

Group by CustID

CustID	OrderID	TotalDue
1	1	50
2	2	76
1	3	150
1	4	25
3	5	100
3	6	30
2	7	60
1	8	90

CustID	OrderID	TotalDue
1	1	50
1	3	150
1	4	25
1	8	90

CustID	OrderID	TotalDue
2	2	76
2	7	60

CustID	OrderID	TotalDue
3	5	100
3	6	30

Apply any aggregate functions: SUM, AVG, COUNT...

CustID	OrderID	TotalDue
1	1	50
2	2	76
1	3	150
1	4	25
3	5	100
3	6	30
2	7	60
1	8	90

CustID	OrderID	TotalDue
1	1	50
1	3	150
1	4	25
1	8	90

COUNT(OrderID) = 4
SUM(TotalDue) =315
MAX(OrderID) = 8

CustID	OrderID	TotalDue
2	2	76
2	7	60

COUNT(OrderID) = 2
SUM(TotalDue) =136
MAX(OrderID) = 7

CustID	OrderID	TotalDue
3	5	100
3	6	30

Return 1 row per group

				CustID	OrderID	TotalDue				
				1	1	50				
CustID	OrderID	TotalDue		1	3	150				
1	1	50		1	4	25				
2	2	76		1	8	90	Custl D	Order Count	Last Order	Total
1	3	150					1	4	8	315
1	4	25		CustID	OrderID	TotalDue				
				2	2	76	2	2	7	136
3	5	100		2	7	60	3	2	6	130
3	6	30	_	2	/	00				
2	7	60		CustID	OrderID	TotalDue				
1	8	90		3	5	100				
				3	6	30				

SELECT CustID, COUNT(*) AS [Order Count], MAX(OrderID) AS [Last Order], SUM(TotalDue) AS Total FROM Sales
GROUP BY CustID

DEMO: GROUP BY

Lab

• Complete Module 6 Lab 1

HAVING

- Use to filter the groups using an aggregate function
- Use WHERE to filter rows
- Use HAVING to filter groups

Return 1 row per group

CustID	OrderID	TotalDue
1	1	50
2	2	76
1	3	150
1	4	25
3	5	100
3	6	30
2	7	60
1	8	90

CustID	OrderID	TotalDue
1	1	50
1	3	150
1	4	25
1	8	90

CustID	OrderID	TotalDue
2	2	76
2	7	60

CustID	OrderID	TotalDue
3	5	100
3	6	30

CustID	Order Count	Last Order	Total
1	4	8	315
2	2	7	136
3	2	6	130

HAVING COUNT(OrderID) > 2

CustID	OrderID	TotalDue
1	1	50
2	2	76
1	3	150
1	4	25
3	5	100
3	6	30
2	7	60
1	8	90

CustID	OrderID	TotalDue
1	1	50
1	3	150
1	4	25
1	8	90

CustID	OrderID	TotalDue
2	2	76
2	7	60

CustID	OrderID	TotalDue
3	5	100
3	6	30

CustID	Order Count	Last Order	Total
1	4	8	315
2	2	7	136
3	2	6	130

CustID	Order Count		Total
1	4	8	315

DEMO: HAVING

Module 7: Subqueries and Common Table Expressions

IN Subquery

Use a query to generate a list for the WHERE clause

```
SELECT <column list>
FROM <schema>.<table1>
WHERE <col> IN (SELECT <col> FROM <schema>.<table2>)
```

SELECT <column list>
FROM <schema>.<table1>
WHERE <col> NOT IN (SELECT <col> FROM <schema>.<table2>)

DEMO: IN Subquery

Lab

• Complete Module 7 Lab 1

Correlated subquery

- Typically in the SELECT list
- Pull a scalar or single value into a query
- Inner query can see outer query
- Only one column allowed in the subquery
- Often used to separate logic from outer query

Correlated subquery

CustID	OrderID	Amt
1	101	5
2	102	10
1	103	70
3	104	30
2	105	90
1	106	15

SELECT
CustID, OrderID, Amt
FROM Orders AS Ord;

CustID	OrderID	Amt	AvgAmt
1	101	5	30
2	102	10	50
1	103	70	30
3	104	30	30
2	105	90	50
1	106	15	30

SELECT
CustID, OrderID, Amt,
(SELECT AVG(AMT)
FROM Orders
WHERE CustID = Ord.CustID) AS AvgAmt
FROM Orders AS Ord;

DEMO: Correlated Subquery

Lab

• Complete Module 7 Lab 2

Derived table

- Subquery in the FROM clause
- Also used to separate the logic
- Join to the subquery
- Outer query can see the columns in the SELECT list
- Often nested

Common table expression (CTE)

- Similar to derived table
- Defined up front
- No nesting, but one CTE can use other CTEs
- Also used to separate logic
- Previous statement MUST end with;

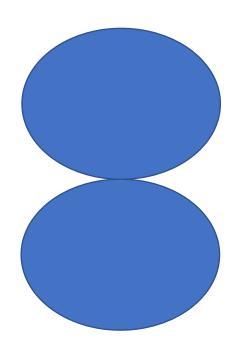

DEMO: Derived tables and CTEs

Lab

• Complete Module 7 Lab 3

UNION

- Combine the results of two queries
- Rules
 - Same number of columns
 - Compatible data types
 - Names from first query
 - ORDER BY at end
- Also UNION ALL, EXCEPT, and INTERCEPT

UNION – Eliminates Duplicates

Names

ID	Name
1	Kevin
2	Sam
3	Jane
4	Kathi

Customers

CustID	FirstName
100	Bill
120	Denise
130	Anna
4	Kathi

ID	Name
1	Kevin
2	Sam
3	Jane
4	Kathi
100	Bill
120	Denise
130	Anna

SELECT ID, NAME
FROM Names
UNION
SELECT CustID, FirstName
FROM Customers;

UNION ALL – Retains duplicates

Names

ID	Name
1	Kevin
2	Sam
3	Jane
4	Kathi

Customers

CustID	FName
100	Bill
120	Denise
130	Anna
4	Kathi

SELECT ID, NAME
FROM Names
UNION ALL
SELECT CustID, FirstName
FROM Customers;

Except – Find items that don't match

Names

ID	Name
1	Kevin
2	Sam
3	Jane
4	Kathi

Customers

CustID	FName
100	Bill
120	Denise
130	Anna
4	Kathi

ID	Name
1	Kevin
2	Sam
3	Jane

SELECT ID, NAME
FROM Names
EXCEPT
SELECT CustID, FirstName
FROM Customers;

INTERSECT — Find rows that match

Names

ID	Name
1	Kevin
2	Sam
3	Jane
4	Kathi

ID	Name
4	Kathi

Customers

CustID	FName
100	Bill
120	Denise
130	Anna
4	Kathi

SELECT ID, NAME
FROM Names
INTERSECT
SELECT CustID, FirstName
FROM Customers;

Demo: UNION
